

Venetian blind window systems

Perfect heat insulation

Der SonnenLichtManager

Venetian blind window systems can be integrated into the facade as an unobtrusive or as a visible element. As the units fit seamlessly into the exterior insulation and finish systems (EIFS), these external venetian blinds easily meet the continually increasing requirements for thermal protection. Aside from classic guide profiles, external venetian blinds with slender cable guidance or a cable/rail combination are also a possibility.

Features

Max. width*	4,000 mm
Max. height*	4,000 mm
Max. area*	16 m ²
Slats	Beaded 80 S mm, flat slats 80 mm, dim-out slats 73/90/93 mm
Drive	Motor
Fields of application	New building, renovation

*depending on type and equipment

The benefits for you

- Concealed or visible integration in the facade
- Ideal as a design feature
- No need for additional fixing of cover panels – prevention of thermal bridges
- Front sides of guide profiles can be entirely plastered

Brilliant extras

- ProVisio technology
- Integrated fall protection VisioNeo
- EasyClean coating
- Super-fast terrace motor
- Integrated insect screen
- slowturn
